SUMMARY

Hong Kian is a Principal at SAA, with extensive experience across a diverse range of project typologies and disciplines including mixed use, transportation, residential, institutional, hospitality, landscape design, master planning and urban design. Blending his breadth of experience with a balance of design and technical expertise, Hong Kian is a versatile leader who is collaborative in his approach, and leads SAA's Design Team in distilling designs into simple, yet elegant solutions.

Since joining the firm in 2015, Hong Kian has been involved in a multitude of transportation projects including 16 mass rapid transit stations in both Singapore and Malaysia. He has also been integral to landmark projects such as the Jurong Lake District Masterplan and JTC Bulim, projects which have placed him at the forefront of car-lite infrastructure planning and integration.

These projects, which focus on an ecological future and where environmental sustainability is a key design consideration, are a natural affinity for Hong Kian. He is keenly attuned to the needs of end users and addresses their concerns by focusing his passions on creating empathetic solutions; which has guided his contribution towards the development of the Rainbow Centre, a specially designed centre for special-needs children during his own personal time.

As a testament to his versatility, Hong Kian champions the use of technology to elevate design, constantly pushing the envelope on the firm's technological capabilities to support the design process.

With his breadth of experience across design and project management, Hong Kian is a mentor in the training and developing of upcoming architects in SAA.
